

Public Site

Where do I set who can access a page on the website?

You can control who a web page is visible to from the permission section of the web editor.

Go to the pages menu and add a new page or select a page that you want to set permissions for. You will see a permissions tab in the page setting section, click that to expand the tab to see all of the options.

Layout

right-column.php ▾

Other ▾

Permissions ←

Select which member types may view this page.

<input type="checkbox"/>	Parent
<input type="checkbox"/>	Coach
<input type="checkbox"/>	Board
<input type="checkbox"/>	Member

Note: If all permission fields are unchecked, the page will inherit permissions from its nearest parent page with permissions. If no permissions are set at all levels, the page will be accessible to the world.

Save ←

Once you select your options and click save, only those selected will be allowed to view the page. Also, keep in mind that any children listed under this page will inherit its permissions.
