## How do I setup which statistics to track for a division?

Navigate to setup->statistics & evaluations->division statistics.

The screenshot shows a web interface for configuring statistics. It features several dropdown menus and buttons. At the top, there is a dropdown for 'Please choose a division:' with 'Major 60' selected. Below it are two more dropdowns: 'Set Sport Group:' with 'test' selected and 'Set Stat Group:' with 'test2' selected. On the left is a list box titled 'Stats to Use:' which is currently empty. On the right is a list box titled 'Stats to Ignore:' containing 'test3'. Between these two list boxes are four buttons: '<<< Add', '<<< Add All', 'Remove >>>', and 'Remove All >>>'. At the bottom center is a 'Save Settings' button.

Choose a division to select stats for. Set the sport group for the division. Select a stat group. The stats for the group will either be listed under "Stats to Use" or "Stats to Ignore". You add stats that you want to use by selecting from the ignore box and choosing add or add all. You choose which stats to ignore by selecting from the stats to use list and clicking remove or remove all.
