## How do I schedule games after I generate them?

\*In order to schedule games, you would have already had to create sites and resources as well as timeslots.

1. Navigate to scheduling/games->utilities->auto. schedule and select generate schedule. You will see a screen like the one shown below.

The screenshot shows the 'Auto Scheduler' interface. At the top, there are three buttons: 'Create Timeslots', 'Generate Games', and 'Generate Schedule'. Below these is a section titled 'Generate Schedule For Games'. This section contains several configuration options:

- Division:** A dropdown menu with 'Select a Division'.
- Game Type:** A dropdown menu with 'All'.
- Start Date:** Three dropdown menus for month (January), day (1), and year (2014).
- End Date:** Three dropdown menus for month (January), day (1), and year (2014).
- Allow Double Headers:** Radio buttons for Yes, No.
- Back to Back Games (under constr.):** Radio buttons for Allow, None, Force.
- Force Gap Between Games (under constr.):** Radio buttons for Yes, No.
- Home Field:** Radio buttons for Force, Use, Ignore.
- Avoid Double Scheduling Coaches:** Radio buttons for Yes, No.
- Place Blacked Out Games At End Of Schedule:** Radio buttons for Yes, No.

Below these options are two buttons: 'Round Grouping Options' and 'Select Resources'. At the bottom of the form are two buttons: 'Generate Schedule' and 'Delete Schedule'.

2. Choose the division you want to schedule games for (you can only schedule games one division at a time).

3. Select the type of games to be played (you can choose season, playoff, or both).

4. Select the start and end dates for the schedule (usually the start and end of the season, but it can be different).

5. Choose whether or not you want to allow double headers and/or back-to-back games.

6. Choose whether to enforce, use or ignore the home field.

7. You can place blacked out games at the end of the schedule.

8. If you select round grouping options, you get to choose how your rounds get scheduled e.g. one round per week.

9. Select the resources you would like to schedule the games on.

10. Generate schedule and it will show you the results in the finished schedule box below, where you can edit the date, time, and/or location of the game if necessary.

11. Also, if there are some games that have not been scheduled for any reason, they will be shown under games not scheduled, where you can edit the date, time,

# Admin Site

and/or location of the game.

12. If you are satisfied with the completed schedule, you can select publish schedule to have it posted to your website in the schedule module.
