Import Sites

2. Create/Edit Resources

If you have already created sites, they will be listed under create sites. You can edit the information of each site by clicking on the row you would like to edit and clicking save changes when done.

To add a site, fill in the information in the add site box and click the add site button. You can also choose to import sites by going into the import sites tab and using the file picker, then click import sites.

You can also create/edit resources here by going into the create/edit resources tab.
