

Registration

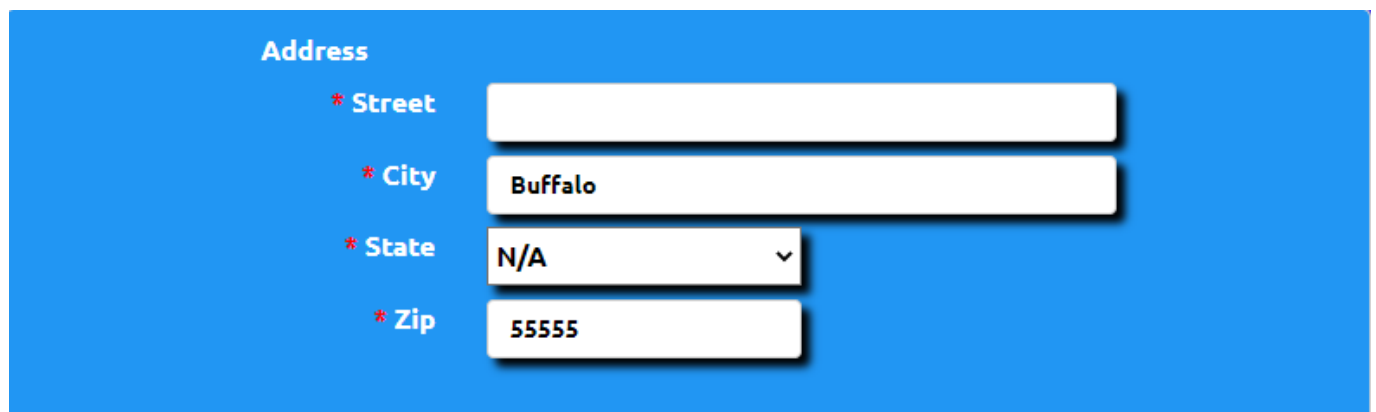

How do I make the parent's city, state, and zip code auto-fill to my league's city, state, and zip code during registration?

Navigate to Setup->Registration->Registration Setup and click the "Parent" tab. Here you will find three separate fields to automatically fill city, automatically fill state, and automatically fill zip.

The screenshot shows the 'PARENT PAGE' tab selected in the top navigation bar. Below the navigation bar, there are two main sections: 'Custom Field List' and 'Auto Fill'. The 'Custom Field List' section has a table with columns 'Name', 'Display', and 'Action'. Below the table are buttons: 'Save Order', 'Saved', 'Preview', and 'New Field'. The 'Auto Fill' section has three rows, each with a checkbox and a label: 'Fill City with "Buffalo":', 'Fill State with "New York":', and 'Fill Zip with "55555":'. All three checkboxes are checked. A red arrow points to the 'PARENT PAGE' tab, and another red arrow points to the 'Fill City with "Buffalo":' checkbox.

If you have checked off the fields, then the corresponding field will automatically fill during the parent step of registration.

The screenshot shows the 'Address' section of a form. It has four rows, each with a red asterisk and a label: '* Street', '* City', '* State', and '* Zip'. The corresponding input fields are: a text box for Street, a text box for City containing 'Buffalo', a dropdown menu for State containing 'N/A', and a text box for Zip containing '55555'.

The city, state, and zip that will get filled in are pulled from the league contact information ([see FAQ entry](#)).
