Registration

How do I create a fee code that only gets applied when a custom field is selected?

When creating or editing fee codes, you have the option of associating it with a custom field to be applied when the custom field is selected. Navigate to setup->registration->registration setup wizard, then under the payment step setup, select the fee group and the fee code that you would like to edit. When creating or editing fees, be sure to check the charge if custom field checked option and select the field that you want to attach it to.
