

I created a page, but it isn't displaying in the menu I want it to. How do I display it?

Navigate to the menu at the top-left of the website editor, and click on "Pages". From here you can edit your page properties. The checkbox labeled "Visible" toggles whether or not the page will appear in the menu. Check this box if you want to have your page displayed in a menu. If you leave it unchecked, it can still be viewed by going to the URL specified by the "URL Path" property.
